VERAE TIME x ZAPIER

TODO

site/packages/zapier-decisions/TODO.md

Open todos

Live `api.veraetime.net` with `MOCK_VERAE=false` and admin bind credentials.

Three-node NATS JetStream cluster on distinct Proxmox LXC (`verae-nats-cluster` ; test env `NATS_URL` cut over; streams replicas=3).

NATS nkeys/mTLS on that cluster (accounts file is still the lab stand-in; not flipped so clients keep working on `vmbr1`).

Exclusive JetStream consumer for `verae.zapier.jobs.events` on `verae-jobs-events` (`JOBS_EVENTS_EXCLUSIVE=1` ; middleware skips the router).

Auth on CS/sales/accounting HTML via `verae-staff-session` (`STAFF_AUTH=1`).

Staff IAM: named users, roles, permissions (`verae-staff-iam` :3028).

Zapier Platform `push` of a private app.

Move portal static files fully into `verae-access-web` (`/portal/` public door; API proxied to loopback edge).

Turn IAM on for the running lab (fleet `STAFF_IAM_URL` + restart).

IAM hardening: JSON sessions, login rate-limit, JSON 401 as well as HTML 302, credit principal = IAM username.

Host keep-alive (`verae-keep`) on NS1 with watch+guard; honors admin pause/stop.

Docs synced to IAM, public portal `:3021` , keep, bootstrap server types.

`verae-bootstrap` clones all module repos and installs deps per server type.
